QUANTUM SOLUTIONS

Job Description

Recruitment Position	Android Development Senior Engineer	Employment Type	Full-time Employee
Job Description	1. Responsible for the development, maintenance, and performance optimization of overseas SDKs for Android mobile games. 2. Work closely with the operations and product teams, providing technical support and feedback during the release and post-release operations. 3. Follow project guidelines and workflows to create relevant technical documentation. 4. Collaborate with the backend team to quickly understand various requirements and translate them into specific development tasks.		
Qualifications	1. 3 to 5 years of Android development experience. 2. Proficient in Java, HTTP communication, and multithreading programming. 3. Comfortable using development tools like Git and Android Studio. 4. Good development habits, including adhering to coding standards and including comments in the code. 5. Familiarity with the process of implementing and developing mobile game SDKs, and experience in the gaming industry is a plus. 6. Strong team player with a strong sense of responsibility. 7. Knowledge of Google Play-related processes and features is preferred.
